FLUIDITY MARINE INC.

Executive Summary · October 2026

Company

Fluidity Marine Inc. is a Delaware C-Corporation founded in 2023, developing rudderless electric marine propulsion. The company is currently testing the waters for a community investment round on Wefunder.

Technology — Thrust Vector Control (TVC)

TVC replaces every mechanical control surface with modulated water jets. Seven nozzles integrated across the transom vector thrust independently — steering, docking, and holding station with **zero rudders**. The system is fully electric: zero emissions, no fuel, oil, or CO_2, and no propellers in the water.

SNAVE — Novel Impeller & Nozzle Designs

SNAVE covers the company's novel impeller and nozzle designs only (patents planned, not yet filed). Each nozzle is a flattened Venturi: a circular inlet converging to a flat rectangular exit with rounded edges at the narrowest point. The seven exits merge into a continuous flat sheet jet spanning the transom — not seven separate jets, one unified sheet.

Market

Beachhead: recreational center consoles, 25–40 ft — a $4B annual U.S. market.
Phase 2: light commercial, 28–50 ft — charter operations, patrol, and dive boats.
Phase 3: OEM factory fit with boat builders.
Total marine propulsion market: $12B+ annually.

Business Model

Direct-to-consumer (recreational boaters seeking sustainable, high-performance alternatives), commercial fleets and maritime operators retrofitting existing vessels, and OEM partnerships.

The Offering

Raising **$3M minimum / $5M maximum** via Wefunder (testing the waters) as an **MFN SAFE with a $20M post-money valuation cap** and no discount; $100 minimum investment. A parallel private placement offers Series Seed Preferred Stock with standard information rights, pro-rata participation, and voting rights.

Use of Funds — $3M Minimum Raise

The $3M minimum funds 12 months: benchmarking, proof-of-concept validation, and first light-manufacturing setup. The full $5M extends the runway toward Series A readiness.

Category	%	Amount
Team — 12 months (~8 employees, engineering & operations)	27%	$800,000
Manufacturing equipment (first light-manufacturing setup)	25%	$750,000
R&D; — impeller & nozzle optimization, benchmarking	17%	$500,000
Facility build-out (development & light manufacturing)	13%	$400,000
Materials & electronics ($200K + $200K)	13%	$400,000

Marketing, legal & G&A;	5%	$150,000

Team

Aaron Evans — CEO / Chief Scientist, inventor of the TVC platform (ex-AWS, ex-NBCUniversal).
Gabriel Grünbaum — Business Development & Strategy.
Natasha — CTO, control systems.
